Imagine all that UQ eSpace could do for you...

- You’re a medical researcher. Upload digitised copies of scans and X-rays, animations, medical images and spreadsheets of results of experiments and testing. We can even store your laboratory notes, and set up separate collections for different research projects. UQ eSpace can link all this digital material to any subsequent publications.

- You’re a composer. Deposit digital versions of your scores or sheet music for others to read, deposit audio or video files of performances as well as any articles about or reviews of your compositions. UQ eSpace will link the different objects together so that musicians can follow the score as they listen to the work being performed.

- You’re an historian. Upload sample chapters and bibliographies of your books to UQ eSpace to increase public awareness and visibility. Deposit all the notes and other unpublished background that wouldn’t fit into the books, as well as your published articles and conference papers. Upload works in progress to a private collection so that you can keep track of versions.

- You’re a marine biologist with several years’ worth of datasets and publications. Upload sample chapters and abstracts of published books, as well as depositing copies of published articles and papers. Make your spreadsheets, datasets, sound files and images available for other scholars to re-purpose for other types of research. UQ eSpace can keep it all together.

- You’re an art history lecturer with an extensive file of images you have collected over the years. UQ eSpace makes it simple to re-use those images in your teaching. Upload images to different collections that mirror your individual course requirements. Images can easily be switched between collections. We can provide watermarking and other security measures to protect your IP.

- You’re an astrophysicist with very large files. You want to share them with a research team at different universities in Australia, the UK and Europe. UQ eSpace has incorporated a range of authentication tools so that your colleagues can easily log in to access and share your data.

- You’re an architect with several award-winning designs to your credit. Use UQ eSpace to showcase your plans, drawings, photographs, and blueprints, as well as depositing articles about, and reviews of, your work. You can also link from any of your records to awards and citations your designs have won.

- You’re compiling your school’s research record for an annual report. Enter the data in UQ eSpace once and the data can then be re-used for the Research Quality Framework, for use in school reviews, staff resumés, grant and tenure applications, and a range of other purposes.

UQ eSpace is a new, electronic, open access archival repository to curate and preserve research and teaching data produced at The University of Queensland. It acts as a storehouse for publications, documents, files and research datasets or points to where such items are stored remotely. It also provides a mechanism for the sharing of raw research data with other researchers worldwide.

Join the growing number of UQ academics and researchers who are preserving their digitised research material with UQ eSpace.

Keen to hear how UQ eSpace can help with your data storage needs?
